

# Secure Coding Lab - 8

Name : Meghana V

Reg no :18BCN7070

- 1) Firstly, download Windows 7 in virtual machine

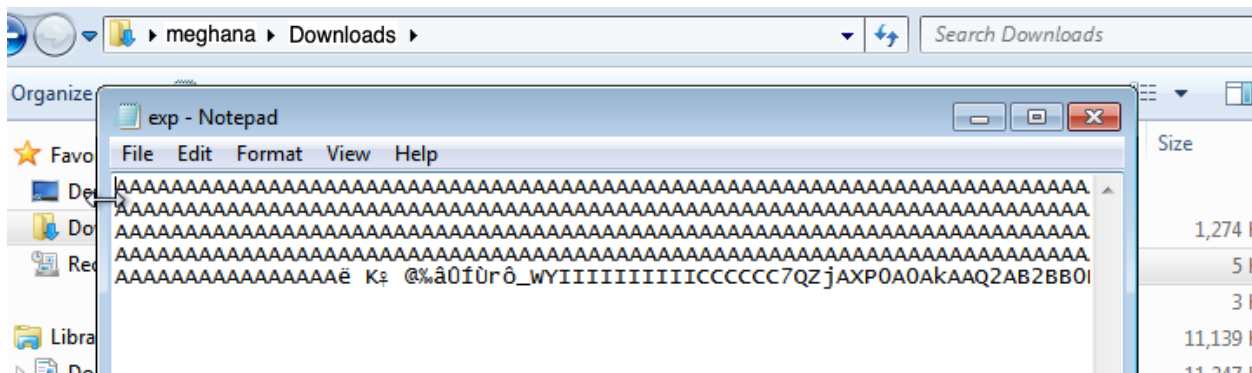

- 2) Download python and generate the payload by running the exploit2.py file

Vulln	05-04-2021 14:39	File folder	
ChromeSetup	24-03-2021 17:16	Application	1,274 KB
exp	05-04-2021 15:46	Text Document	5 KB
exploit2	05-04-2021 15:45	Python File	3 KB
frigate-3.36	05-04-2021 15:26	Application	11,139 KB
Frigate3_Std_v36	05-04-2021 15:34	Application	11,247 KB

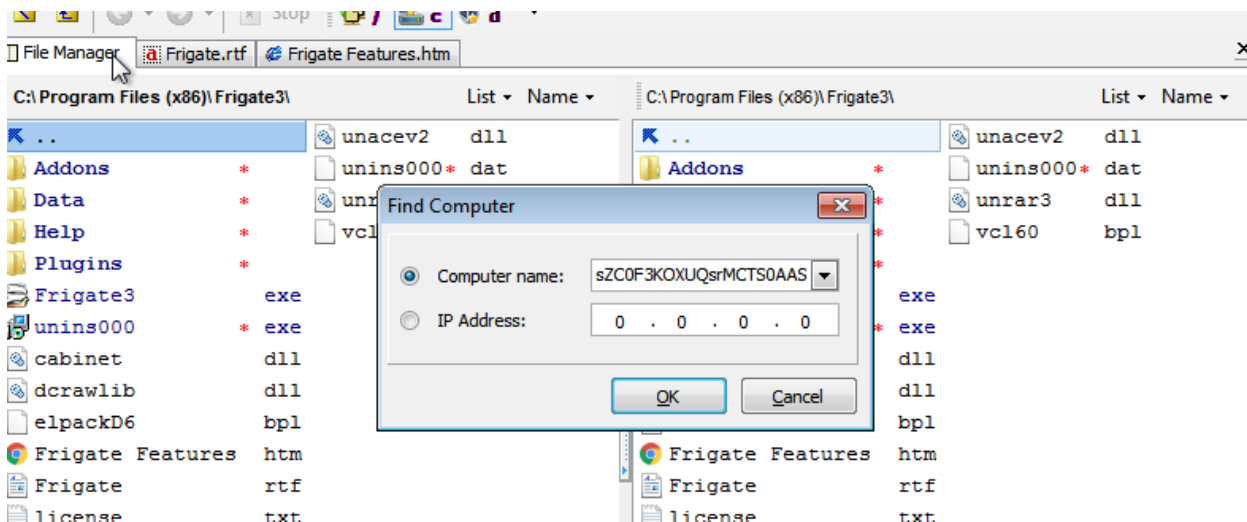

- 3) Next, you install Frigate software by ignoring all the notions that windows throws at you saying that its a vulnerability.

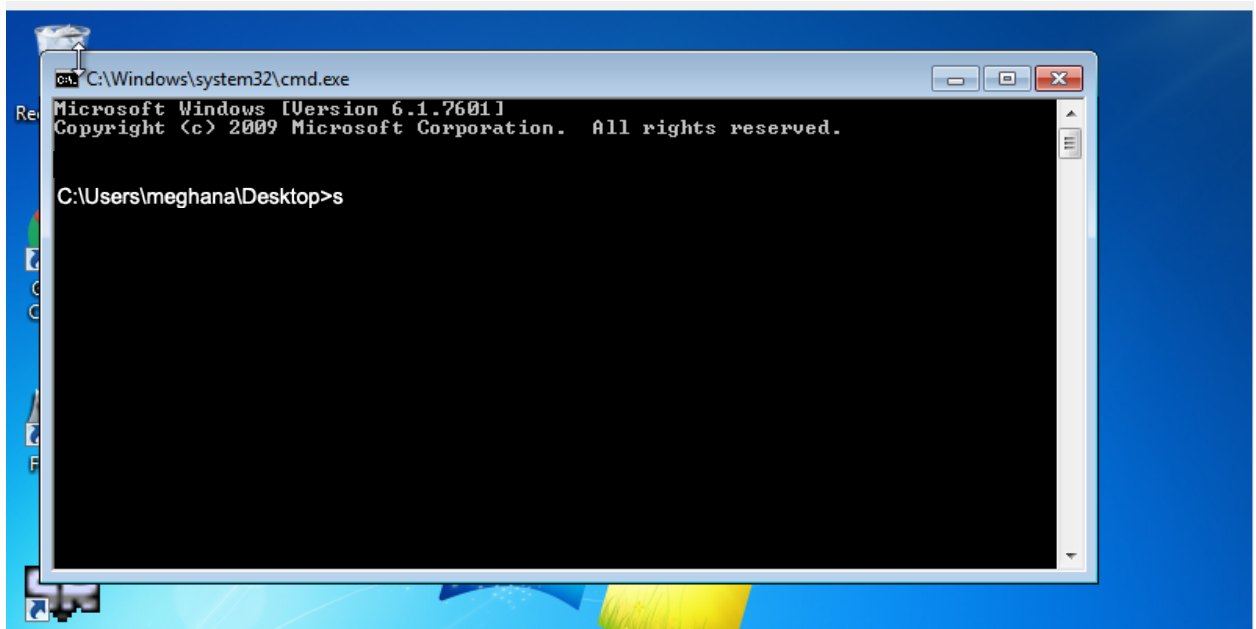

4) copy , paste the generated payload.

5) Fiddle around with Frigate and paste the exploit in different text areas, until you find the vulnerability.

6) Vulnerability found!!!!!!!!!!!!!!!!!!!!

- 7) Now, you have to change the default trigger to calculator and generate the payload again and crash the application.
